DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by United States

 Patent Number 4,106,858 to Dargent et al (hereinafter Dargent).

Dargent discloses in figures 3-4, 7 and column 3, line 38 to column 7, line 19, a liquid crystal display comprising a first substrate (52) and a second substrate (56), said first substrate and second substrates being located facing one another with a liquid crystal material layer (50) thereinbetween, a first and second electrode (54, 58) arranged at the first and second substrates, said electrodes formed on liquid crystal sides of the first and second substrates, whereby the liquid crystal material layer exhibits zero-pretilt (when electrodes have no voltage applied) and at least one of the electrodes at its end parts is connected to at least a first (Vhf) and a second (Vbf) mutually exclusive and adjustable voltage and is adapted to exhibit essential residual resistance between the end parts.

As to claim 2, the voltage difference can be adjusted during operation.

As to claims 3-4, the voltage and applied electric fields are adjustable during operation of the device.

As to claim 5, any electronic part would have some form of resistance.

Application/Control Number: 10/567,069

Art Unit: 2883

As to claim 6, operation of the electrodes are independent and can operate a voltage differential maintainable during operation.

As to claim 7, two voltage sources are disclosed and would have a voltage drop between parts.

As to claim 8, a transparent resistive electrode is disclosed.

As to claim 9, the alignment is done electronically.

As to claims 10-11, tin oxides are disclosed (column 7, line 10).

As to claims 12-14, SiO or impregnated surfactants are used.

Conclusion

- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. United States Patent Application Publication 2002/0113753.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Wong whose telephone number is 571-272-2363. The examiner can normally be reached on Monday through Friday, 830AM - 430PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank Font can be reached on 571-272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2883

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
